

Prospecting Operating System

A daily control card for turning verified signals into qualified meetings and auditable learning.

CONTROL	1. DETECT	2. DIAGNOSE	3. DEPLOY	4. DRIVE
Plan -> Record -> Review	Rank evidence and fit	Build a testable hypothesis	Execute relevant touches	Convert, hand off, or recycle

Decision gates

Gate	Pass question	If no
Evidence	Do I have a source, date, and observed fact?	Research or nurture
Fit	Does the account and persona meet ICP rules?	Disqualify or reroute
Hypothesis	Did I label inference and write a validation question?	Diagnose before outreach
Message	Does it pass GIFT and request one low-friction next step?	Revise before sending
Preference	Is the channel, timing, and contact status allowed?	Pause or stop
Handoff	Can another seller continue without making the buyer repeat context?	Complete CRM fields

Queue states

80-100	60-79	40-59	Below 40
CONTACT NOW Start after review	RESEARCH Close one evidence gap	NURTURE Set trigger/date	DISQUALIFY Record reason

Daily rhythm - protect the sequence, adapt the clock

Queue reset	Detect	Live channels	Diagnose + deploy	Meetings + practice	Record + review
Clear overdue work	5 sourced accounts	Calls and replies	Reviewed messages	Calls, role-play, handoff	CRM and tomorrow queue

Deploy and improve

VSA six-touch baseline: calibrate timing, volume, and channel order with buyer context and your own historical results.

Touch	Day	Channel	Purpose	Asset / rule
1	1	Email	Establish signal relevance	RECAP-style note + interest CTA
2	1	Social	Build familiarity	Engage only when contribution is genuine
3	3	Phone	Test one hypothesis	State the reason for the call
4	6	Email	Provide utility	One relevant proof point or asset
5	8	Video/voice	Make diagnosis concrete	Optional 45-second walkthrough
6	10	Email	Close respectfully	Permission-based exit or nurture

Metric -> next inspection

If this is weak...	Inspect first	Do not assume
Connect rate	Number accuracy, call timing, list quality	The rep needs more activity
Positive reply rate	Signal, persona, message, proof	Shorter copy alone fixes it
Conversation -> meeting	CTA, qualification, confidence	Every conversation should convert
Meeting held rate	Expectations, reminders, agenda	A booking equals progress
Meeting -> opportunity	ICP, diagnosis, handoff quality	The AE is the only problem
Pipeline created	Account selection and opportunity quality	Raw pipeline volume is sufficient

GIFT Grounded Individual Fact-checked Tone-matched	STOP / RECYCLE Stop on opt-out, DNC, policy restriction, or clear no. Recycle only with a reason, review date, and re-entry trigger.	WEEKLY TEST Find one bottleneck. Change one variable. Record sample and period. Adopt, Adapt, or Abandon.
