

Signal-to-Meeting Prospecting Scorecard

Choose the next best account action before you spend time drafting outreach.

Evidence rule: Score only what you can verify. A high score earns attention - it does not prove the account will buy.

100-point account filter

Factor	Max	Pass standard	Your score
1. ICP fit	20	Industry, size, geography, use case, and disqualifiers match.	___ / 20
2. Trigger event	20	A verified change creates a plausible reason to act now.	___ / 20
3. Intent / engagement	15	Approved evidence suggests active interest or category research.	___ / 15
4. Persona relevance	15	This person owns, influences, or experiences the outcome.	___ / 15
5. Pain hypothesis	10	Evidence supports a plausible problem stated as a hypothesis.	___ / 10
6. Relationship path	10	A legitimate referral, mutual link, or prior relationship exists.	___ / 10
7. Message readiness	10	Reason, buyer outcome, proof, and proportionate ask are ready.	___ / 10

Action thresholds

Score	Action	Immediate move
80-100	CONTACT NOW	Send a reviewed first touch and log the next action.
60-79	RESEARCH FURTHER	Find one missing trigger, role fact, or proof point.
40-59	NURTURE	Monitor for a stronger signal; add value without forcing a pitch.
0-39	DISQUALIFY	Remove from active work unless new evidence changes the score.

Account scoring worksheet

Complete one copy per account. Use source URLs and dates so another seller can audit your thinking.

Field	Your evidence
Account / company	
Target contact and role	
Verified signal + date	
Source URL	
Observed fact	
Seller inference	
Question to validate	
Total score / action	_____ / _____
CRM next action + date	

VSA-original: The seven factors, weights, and thresholds are instructional prioritization logic. Calibrate them with employer data once you have enough outcomes.

External validation: Salesloft supports prioritizing by ICP fit, intent, engagement, and signal-led research. Source: <https://www.salesloft.com/resources/blog/sales-prospecting>
